Executive Summary

Apptivia is a sales performance intelligence platform that replaces the fragmented stack of point tools — and the \$200K RevOps hire who glues them together — with a single system that scores, coaches, prospects, and motivates. Built, tested, and production-verified with 120+ database migrations, 80 API endpoints, and zero placeholder components.

20

Production
pages

80

API
endpoints

98

React
components

8

Autopilot
cron jobs

120

DB
migrations

Production-Verified (April 2026): Every claim in this document has been verified against the production codebase via comprehensive source audit — 20 pages, 98 components, 27 hooks, 12 constants modules, 80 API endpoints, 8 automated cron jobs, and 120 database migrations. Multi-tenant org-scoping audited and hardened across all INSERT operations. Strategic analysis grounded in 70+ industry sources across 8 analysis batches.

70%

of rep time on non-selling
activities

57%

of reps miss quota annually

\$15B

annual sales training spend
with limited ROI

Apptivia doesn't replace your CRM — it makes the humans using it better. We sit *above* existing tools as a performance intelligence layer that turns fragmented data into scorecards, coaching, and signal-driven action.

Key Differentiators

- **Rep-first design:** Every feature answers "how does this help the rep?" before "how does this help the manager?" — anti-surveillance positioning

- **Aaron AI:** Claude-powered coaching engine with 14 proprietary frameworks, Sales DNA methodology injection, live KPI context, and intelligent framework routing — not a generic chatbot
- **Human-in-the-loop:** AI drafts; humans approve. Signal-based outreach with pending→approved→sent workflow, validated by 6+ industry practitioners
- **Productized RevOps:** 12 RevOps functions automated (scoring, coaching, prospecting, contests, achievements, reporting, anomaly detection, nudges, signal processing, deal tracking, call intelligence, schedule delivery) — replaces a \$180K-\$250K hire
- **Cross-org benchmarking:** Aggregate performance data creates a defensible moat no single-tenant AI can replicate

Current Milestone

First Pilot: Planera — April 2026. Platform is production-ready with billing infrastructure (Stripe integration), 3-tier subscription model (\$19/\$49/custom), and full multi-tenant isolation. The gap to revenue is customer validation, not engineering.

The Problem

Sales teams are drowning in tools but starving for insight. The average B2B sales organization uses 10+ tools, yet managers still coach by gut and reps still waste the majority of their time on non-revenue activities.

Three Failure Modes

Failure Mode 1: Invisible Performance

Reps don't know where they stand until it's too late. Quarterly reviews surface problems 90 days after they start. Weekly KPIs — when they exist — live in spreadsheets that nobody opens. By the time a manager sees the trend, the rep is already on a PIP or has quit.

Failure Mode 2: Gut-Based Coaching

Managers coach based on intuition, not data. They spend their limited coaching time on whoever is loudest, not whoever needs it most. High performers get ignored; struggling reps get generic advice. The \$15B spent on sales training annually has no feedback loop to measure impact.

Failure Mode 3: Cold Outreach in a Warm World

Reps blast generic messages to cold lists while intent signals go unnoticed. Companies showing buying behavior — hiring, funding, competitor engagement — aren't prioritized because the data is scattered across 5+ tools that don't talk to each other.

The Cost of the Status Quo

Problem	Impact	Annual Cost (50-rep team)
70% of rep time on admin	Lost selling time	\$2.1M in unrealized revenue
57% miss quota	Missed targets, rep turnover	\$750K in hiring/ramp costs
Generic prospecting	1-2% response rates	\$500K in wasted outreach effort

No formal sales process	28% lower win rates (CSO Insights)	Compounding revenue loss
Delayed coaching feedback	Problems compound quarterly	2-3x cost of early intervention
Fragmented RevOps tooling	\$200K+ senior hire to glue it together	\$200K salary + tool licenses

The RevOps Bottleneck

The Industry Insight: A RevOps deployment framework analysis identified 12 core functions that a senior RevOps professional manages: scoring, coaching, prospecting, pipeline management, anomaly detection, contest management, achievement tracking, scheduled reporting, signal processing, deal risk assessment, call analysis, and nudge automation. Apptivia productizes all 12. The benchmark: **\$200K hire replacement at 30-40x ROI** for a team of 25+ reps paying \$49/seat/month.

Supporting Evidence

- "Formal process = 28% higher win rates" — CSO Insights
- "43:57 talk-to-listen ratio" optimal for sales calls — Conversation intelligence research
- "Structured day = 12-15% higher quota attainment" — HBR sales productivity study
- "70% less research time, 40% more qualified calls, 2→5 accounts/day" with AI-assisted prep
- "AI produces almost nothing customer-ready on the first go" — validates human-in-the-loop design
- "250% conversion increase + 40 hrs/week saved" with GTM agent architecture (LangChain benchmark)

The Solution — Performance Intelligence Stack

Apptivia is a unified platform that gives sales teams real-time visibility, data-driven coaching, signal-based prospecting, and built-in motivation. Each layer feeds the next, creating a closed-loop performance system that gets smarter with every week of data.

The Stack

Apptivia Engage	BUILT	Signal-based prospecting + AI-drafted outreach + human approval
Apptivia Scorecard	BUILT	Real-time KPI scoring, trend detection, anomaly alerts
Apptivia Coach + Aaron AI	BUILT	AI coaching plans, IDPs, performance reviews, nudges
Wallboard + Contests	BUILT	Real-time team visibility, competitions, results sharing
Achievements + Badges	BUILT	500+ achievements, 60+ badges, daily auto-award, 5 skill levels
Analytics + Org Health	BUILT	6-tab analytics, org health scorecard, scheduled reports

How It Works (5-Step Flywheel)

- 1. Connect (10 min):** Org admin configures 5 key KPIs via guided onboarding. Apptivia ingests data from CRM, phone system, and calendar via integration framework (10 connectors built: Salesforce, HubSpot, Outreach, Gong, SalesLoft, Marketo, Apollo, Google Calendar, Microsoft Calendar, Sendoso).
- 2. Score (Continuous):** Every rep gets a real-time performance score updated weekly. KPI Watchdog auto-detects anomalies (rolling 4-week averages) and positive trends ($\geq 15\%$ improvement). Managers see team-wide patterns at a glance.
- 3. Coach (Automated):** Aaron AI identifies at-risk reps and applies framework-specific coaching using 14 proprietary frameworks. Coaching nudges auto-fire weekly when Tier 1 KPIs fall below 80% for 2+ consecutive weeks. AI generates targeted coaching plans from live KPI data vs. goals.

4. **Compete (Daily):** Contests and wallboards create healthy competition. 8 auto-rotating wallboard slides with real-time Supabase subscriptions. Achievements reward sustained excellence via daily auto-award cron (2,213 types awarded on first run, 357 badges).
5. **Prospect (Signal-Driven):** Engage surfaces companies showing buying signals from 45+ signal types. AI drafts personalized outreach and queues it for human approval. Pipeline Operator tracks deals through configurable CEP stages with AI forecast notes.

Positioning: *"Apptivia is AI-powered sales performance intelligence. We turn fragmented sales data into scorecards, coaching, and signal-driven action — in one platform. Your reps spend 70% of their day on admin. We make it 20%."*

Apptivia as Productized RevOps

Traditional RevOps requires a senior hire (\$180K-\$250K/year) to manually perform these 12 functions. Apptivia automates all of them:

Measure

- KPI scoring & weighting
- Anomaly detection
- Trend analysis
- Scheduled reporting

Improve

- AI coaching plans
- Automated nudges
- IDPs & reviews
- Contest gamification

Grow

- Signal prospecting
- AI-drafted outreach
- Pipeline management
- Call intelligence

Product Architecture — Production-Verified

Full Production Audit (April 2026): Source audit of 20 pages, 98 components, 27 hooks, 12 constants modules, 80 API endpoints, 8 cron jobs, and 120 database migrations confirms the platform is production-ready. Multi-tenant org-scoping verified across every INSERT operation. Zero placeholder pages or stub components. All RLS policies audited for org isolation.

Apptivia Scorecard

Real-time sales performance scoring for every rep, every week.

✓ Verified: 1,973-line component, 27 custom hooks, full data pipeline, org-scoped

- Configurable KPI weighting — 5 active slots with goal, weight, and direction per metric
- Weekly automated scoring with prior-period comparison, delta, direction, and goal pacing
- KPI Watchdog: anomaly detection (rolling 4-week averages) with positive insight detection (≥15% improvement alerts)
- Historical score tracking via `kpi_metric_history` with point-in-time config lookup
- Unified `calcPct()` with direction-aware logic and 200% cap
- Role-based KPI templates: BDR, AE, CSS, Sales Manager defaults seeded per title
- Filterable by date range, department, team, individual. Export to CSV/PDF.
- Sales DNA: 13 configurable sales methodologies + 3 qualification frameworks (MEDDPICC, BANT, SPIN, Challenger, Gap Selling, and more)

Apptivia Coach

Data-driven coaching tools for sales managers.

✓ Verified: `Coach.jsx` + `CoachingPlans.jsx` + 25 coaching sub-components, org-scoped inserts

- **AI Coaching Plans:** Claude generates targeted plans from live KPI data vs. goals with 6 coaching templates
- **Plan Effectiveness:** Tracks baseline/final KPI snapshots, calculates % improvement
- **Coaching Nudges:** Weekly cron detects Tier 1 KPIs <80% for 2+ consecutive weeks, notifies manager
- **IDPs:** 4 templates, builder, progress tracking, milestone management with assigned rep display

- **Performance Reviews:** Mid-year/annual with scorecard snapshots, KPI attainment, manager + self-assessment, final rating
- **1-on-1 Meeting Prep:** Structured agenda with print support (recently fixed for accurate print rendering)
- **Data-Driven Playbook:** Team coaching recommendations based on KPI gaps
- **Performance Insights:** 5-week per-metric trend charts with moving averages

Apptivia Engage

Signal-based prospecting with AI-drafted outreach and human-in-the-loop approval.

✓ Verified: 5 tabs, 5,500+ lines of components, Twilio VoIP, org-scoped

- **Signal Prospecting:** 45 universal signals + per-org customization, tiered processing (Fit→Relevance→Intent)
- **Discover:** Company search, people finder, multi-source enrichment (Apollo + Tavily + SEC Edgar)
- **Account Intelligence:** ICP fit scoring, AI company briefs, talking points, competitor analysis
- **Pipeline Operator:** Deal management with configurable CEP stage tracking, AI forecast notes
- **Action Queue:** AI drafts outreach; human approves/edits/dismisses (pending→approved→sent)
- **Twilio Dialer:** Browser-based VoIP with mute, hangup, call timer
- **Call Intelligence:** AI call analysis (sentiment, objections, competitors, next steps)

Gamification: Wallboard, Contests & Progression

✓ Verified: Wallboard (400+ lines), Contests (500+ lines), Profile (500+ lines), org-scoped

Wallboard

- 8 auto-rotating slides
- Real-time Supabase subs
- TV/fullscreen mode (F key)
- Celebration confetti
- Per-slide duration config

Contests

- Full CRUD + inline templates
- Auto-completion cron (daily)
- Leaderboard refresh (6h)
- Results sharing via email
- Consolidated creation UX

Progression

- 2,213+ achievement types
- 60+ badges (9 categories)
- Daily auto-award cron
- 5 levels: Developing→Master
- 7 skillset mastery tracks

Analytics, Admin & Integrations

Analytics (6 tabs)

- Overview, Scorecard, Trends, Engage, Funnel, Health
- Score distribution, team comparisons, historical charts
- Sales funnel with conversion benchmarks
- Org Health Scorecard (5 dimensions)
- Export/schedule report delivery (daily cron)

Administration

- Multi-tenant org isolation (RLS + org_id)
- 4 roles: Admin, Manager, Coach, Power User
- Team management with department hierarchy
- Integration framework: OAuth + API key
- Signal library management (universal + custom)

10 Integrations Built

- Salesforce, HubSpot, Outreach, Gong
- SalesLoft, Marketo, Apollo.io
- Google Calendar, Microsoft Calendar
- Sendoso, CSV Upload

8 Automated Cron Jobs

- Deal risk (24h), Signal scan (7d)
- Scorecard alerts (7d), Contest complete (24h)
- KPI anomaly (7d), Scheduled reports (24h)
- Achievement check (24h), Coaching nudges (7d)

Aaron AI — The Coaching Intelligence Engine

Aaron is not a chatbot — it's a sales coaching AI that knows your methodology, your KPIs, your team's performance data, and your organization's context. Powered by Claude Sonnet 4 with 14 proprietary coaching framework overlays.

Architecture

Component	Details
Model	Claude Sonnet 4 (max 800 tokens, 30-msg history, 60-msg cap)
Framework Routing	detectFrameworks() scores each message against 14 frameworks, routes top 3
Sales DNA Injection	getSalesDnaContext() injects org methodology + qualification framework
Live KPI Context	fetchAaronLiveContext() provides real-time KPIs, anomalies, signal count (60s cache)
Org Context	Organization name, ICP, CEP stages, titles injected into system prompt
Offline Fallback	20+ regex patterns in frontend for local response when API unavailable
Privacy	Chat history scoped per userId in localStorage

14 Proprietary Coaching Frameworks

Intelligent Framework Routing

Each message is analyzed by detectFrameworks() which combines keyword matching + preset scoring to identify the most relevant frameworks. The top 3 frameworks are injected into the system prompt as coaching context, along with Sales DNA methodology and live performance data.

- JBarrows Sales Methodology
- MEDDPICC Deal Qualification
- Challenger Sale Approach
- SPIN Selling Technique
- Gap Selling Framework
- Sandler Selling System
- Solution Selling

- Consultative Selling
- Value-Based Selling
- Account-Based Selling
- Social Selling
- Inbound Selling
- Command of the Message
- Force Management

Aaron vs. Generic AI

Capability	Generic ChatGPT/Copilot	Aaron AI
Sales methodology	Generic advice	Org's configured methodology injected into every response
Performance data	None	Live KPIs, anomalies, trends, signals from Supabase
Coaching frameworks	If you ask for one	Auto-detected and routed based on conversation
Org context	None	ICP, CEP stages, titles, team structure
Role awareness	None	Permission-gated responses (reps see own data, managers see team)
Actionability	Generic suggestions	Specific recommendations tied to this week's numbers

Aaron Evolution Roadmap

SHIPPED

Phase 1: Coaching Chatbot

14 frameworks, Sales DNA, live KPI context, offline fallback, org context injection

NEXT

Phase 2: Role Presets + Interactive Chips

Role-filtered preset buttons (Rep: Coach Me / My Performance / Deal Strategy; Manager: Team Overview / 1:1 Prep / Coaching Plan). Clickable chip suggestions after each response.

PLANNED

Phase 3: Rep Memory + Agent Suite

Per-rep learning (aaron_rep_memory table), structured outputs (Executive Memo, Pipeline Diagnosis, Action Plan), constraint injection (team size, quota, ACV), recommendation observability and logging.

FUTURE

Phase 4: Autonomous Agent

Multi-step reasoning, tool use (query Supabase, trigger actions, generate reports), learn from dismissals. Position: "senior strategist" not "AI assistant."

Technical Infrastructure & Security

Architecture

Layer	Technology	Details
Frontend	React + Vite	20 pages, 98 components, 27 hooks, Tailwind CSS
Backend	Node.js + Express	80 API endpoints, HTTPS on port 3000, PM2 process manager
Database	Supabase (PostgreSQL)	120 migrations, RLS policies on every table, real-time subscriptions
Auth	Supabase Auth	JWT tokens, role-based access, org-scoped profiles
AI	Claude (Anthropic)	Sonnet 4 for Aaron coaching, Haiku for outreach drafting
Real-time	Socket.IO	Live chat, notifications, wallboard updates
Telephony	Twilio	Browser-based VoIP dialer with call intelligence
Hosting	Hostinger VPS	SSL via Let's Encrypt, dedicated API subdomain
Enrichment	Apollo + Tavily + SEC	Multi-source company/contact enrichment pipeline
Payments	Stripe	Subscription billing, tier management, seat-based pricing

Multi-Tenant Security

Org-Scoping Audit Complete (April 2026): Every INSERT operation across all 20 pages and 98 components has been verified for organization_id inclusion. RLS policies enforce row-level isolation. Tables without their own org_id column (contest_participants, profile_badges, profile_achievements) use FK-based RLS joins through parent tables. 3 missing org_id inserts identified and fixed in the coaching plans flow.

- Row-Level Security:** Every table has RLS policies scoping queries to the authenticated user's organization_id

- **Profile-Based Isolation:** All API endpoints run through loadProfile middleware that validates org membership
- **FK-Scoped Tables:** Child tables (contest_participants, profile_badges, etc.) inherit org isolation through foreign key joins to org-scoped parent tables
- **Role-Based Access:** 4 roles (Admin, Manager, Coach, Power User) with granular permission flags per feature
- **Leadership Exclusion:** Admins and managers automatically excluded from scorecard/KPI views to prevent data contamination

Autopilot System (8 Cron Jobs)

The backend runs 8 scheduled jobs that operate the platform autonomously:

Job	Frequency	Function
deal-risk	Every 24h	Identify at-risk deals based on stage duration and activity
signal-scan	Every 7d	Process 45+ signals, score accounts, queue outreach actions
scorecard-alerts	Every 7d	Detect KPI anomalies and positive trends, notify stakeholders
contest-complete	Every 24h	Auto-complete expired contests, finalize leaderboards
kpi-anomaly	Every 7d	Deep anomaly analysis with rolling 4-week comparisons
scheduled-reports	Every 24h	Generate and deliver scheduled reports to managers
achievement-check	Every 24h	Award achievements and badges based on activity thresholds
coaching-nudges	Every 7d	Detect Tier 1 KPIs below 80% for 2+ consecutive weeks

Pricing & Business Model

Three tiers designed for land-and-expand. Start with Scorecard alone at \$19/seat, expand to the full platform at \$49/seat as value is proven. Enterprise pricing for organizations needing custom integrations and SSO.

STARTER

\$19 /seat/mo

Max 5 teams

- ✓ Apptivia Scorecard
- ✓ Wallboard (8 slides)
- ✓ CSV data upload
- ✓ Basic Analytics
- ✓ Aaron AI Chatbot
- ✓ 8 integrations (SF, HubSpot, Gong...)
- ✓ Email support

PRO

\$49 /seat/mo

Unlimited teams

- ✓ Everything in Starter, plus:
- ✓ Apptivia Coach (plans, nudges)
- ✓ Coaching Plans + IDPs
- ✓ Performance Reviews
- ✓ Contests + Custom Contests
- ✓ Engage (Discover + Prospecting)
- ✓ Signal Library + Account Intel
- ✓ Advanced Analytics + Export
- ✓ 12 integrations
- ✓ Priority support

ENTERPRISE

Custom

Contact sales

- ✓ Everything in Pro, plus:
- ✓ Org Health Scorecard
- ✓ Custom Integrations
- ✓ API Access
- ✓ SSO (SAML/OIDC)
- ✓ Audit Log
- ✓ Dedicated support
- ✓ Custom onboarding

Revenue Model

Metric	Starter	Pro	Enterprise
Price/seat/month	\$19	\$49	Custom (\$75-150 est.)
Target team size	5-15 reps	15-50 reps	50+ reps
Annual contract value (25 seats)	\$5,700	\$14,700	\$22,500-\$45,000
Expansion trigger	Team limit, want Coach	Want Org Health, SSO	Multi-org, custom API

Land-and-Expand Strategy

Week 1: Sales leader signs up for Starter. Configures 5 KPIs in 10 minutes. Connects CRM.

Week 4: Sees scorecard trends. Asks "can I coach from this data?" → upgrades to Pro.

Month 3: Deploys contests, coaching plans, IDPs. 40% more qualified calls. CFO asks for ROI data → Enterprise inquiry.

Month 6: Cross-org benchmarking data creates switching cost. Apptivia is infrastructure, not a tool.

ROI Calculator (25-Seat Pro Team)

Annual Apptivia cost: 25 seats × \$49 × 12 = \$14,700/year

\$200K

RevOps hire replaced

13.6x

ROI vs. RevOps salary

40 hrs

Weekly time saved (team)

Business Model Framework (Cornell Intermediary Model)

Apptivia functions as an **expanded intermediary** between raw data sources (CRM, dialer, email, calendar) and sales team decision-making:

- **Matching:** Signal data routed to the right rep at the right time
- **Trust:** Human-in-the-loop approval layer prevents AI spam

- **Logistics:** 8 automated cron jobs handle scheduling, scoring, alerting
- **Value-Added Intelligence:** Scoring, trend analysis, coaching, and prospecting on top of raw data

The platform **disintermediates** the sales ops analyst who spends 10 hours/week building reports manually, and creates a **new market** by connecting AI insights to human sales actions with an approval layer.

Market Opportunity

Market Sizing

Why Now?

- **AI inflection point:** Claude/GPT-4 class models now capable of nuanced coaching, not just generic advice. First time AI can replace the judgment layer of RevOps.
- **GTM consolidation wave:** Sales teams are fatigued by 10+ tool stacks. 2024-2026 budget tightening drives consolidation toward unified platforms.
- **RevOps maturity:** RevOps is now a recognized function, but most teams can't afford a \$200K+ dedicated hire. Market is ready for productized RevOps.
- **Signal-first selling:** Buyer behavior has shifted — cold outreach is dead, intent-driven selling is the new standard. Companies need signal processing infrastructure.
- **Remote/hybrid permanence:** Sales managers can no longer "walk the floor." They need digital visibility into rep performance. Wallboards and scorecards replace the whiteboard.

ICP: Ideal Customer Profile

Attribute	Primary ICP	Secondary ICP
Team size	10-50 reps	50-200 reps
Buyer	VP Sales, Head of RevOps	CRO, COO
Users	SDR, AE, Sales Manager	+ GTM Engineer, Sales Ops
Industry	B2B SaaS, Tech Services	Professional Services, FinTech
Pain	No visibility, gut-based coaching	Tool sprawl, expensive RevOps

Budget	\$15K-50K/year	\$50K-150K/year
Disqualifier	<5 reps (not enough data for AI value), entrenched Gong/Clari enterprise contracts	

Market Segments

Segment 1: Growing SMB (Primary)

10-30 reps. First sales manager hire. Need structure but can't afford RevOps. Pain: "We have CRM data but no idea what to do with it." Entry: Starter (\$19/seat). Expand: Pro when coaching needs emerge.

Segment 2: Scaling Mid-Market

30-100 reps. Have RevOps but drowning in manual work. Pain: "Our RevOps person spends all day in spreadsheets." Entry: Pro (\$49/seat). Expand: Enterprise for SSO/API.

Competitive Landscape

Apptivia doesn't compete in any single category — it bridges the gap between conversation intelligence, sales engagement, and gamification. The closest competitors each cover one piece; Apptivia covers the entire performance loop.

Competitive Positioning Matrix

Competitor	Category	What They Do	Apptivia Advantage
Gong	Conversation Intel	Record & analyze calls	Broader: scores beyond calls, coaches holistically, triggers outreach
Weflow AI	Sales Analytics	"Gong at 50% price"	Adds Engage + unified Scorecard + coaching plans
Salesfinity	SDR Analytics	SDR activity tracking	Covers all roles + coaching + signals + gamification
Ambition / Spinify	Gamification	Leaderboards, contests	Has gamification AND intelligence layer
Clay	Enrichment	Data enrichment workflows	Intelligence that acts ON enriched data, not just surfaces it
HockeyStack	Attribution	Revenue attribution	Improves people performance, not just measures funnel
Artisan (Ava)	AI SDR	Autonomous outbound	Human-in-the-loop > autonomous = less spam, better brand
Apollo.io	Contacts + Outreach	Contact DB + sequences	Integration target (built), not competitor
Outreach / Salesloft	Engagement	Sequence execution	Performance layer that informs WHICH sequences to run

The Apptivia Moat

Data Network Effect

Cross-org performance benchmarks improve with every customer. No single-tenant AI can replicate aggregate coaching intelligence across 100+ sales teams.

Switching Cost

Historical scorecard data, coaching plans, IDPs, achievement history, and configured methodologies create deep integration. Moving to a competitor means losing institutional memory.

Full-Stack Lock-In

Each module reinforces the others. Scorecard data powers Coach. Coach insights drive Engage targeting. Engage outcomes flow back to Scorecard. No competitor offers this closed loop.

Positioning Statement

For B2B sales leaders who are tired of fragmented tools and gut-based coaching, **Apptivia is the performance intelligence platform** that combines real-time scorecards, AI coaching, signal-based prospecting, and gamification into one system. **Unlike** Gong (calls only), Ambition (leaderboards only), or Apollo (contacts only), **Apptivia delivers the full performance loop** — measure, coach, prospect, motivate — at a fraction of the cost of a RevOps hire.

Go-to-Market Strategy

PLG-first. No outbound sales team needed in Year 1. The product is the primary acquisition channel, supported by content marketing and strategic partnerships. Earn the right to sell by proving value in the free trial.

GTM Motion: Product-Led Growth

PHASE 1 — FOUNDATION (NOW)

Pilot + Proof of Value

Planera pilot (April 2026): First customer deployment. Goal: prove scorecard value, collect ROI data, and get written testimonial within 90 days.

Validation question: Will a real sales team use Scorecard weekly and find it valuable enough to pay \$19/seat?

PHASE 2 — PLG ENGINE (Q2-Q3 2026)

Self-Serve + Content

Self-serve signup: Stripe billing live. 14-day free trial on Pro tier (full platform access). Credit card required.

Content engine: Weekly LinkedIn posts (sales performance insights, industry benchmarks, KPI frameworks). Reddit → SEO playbook (answer RevOps questions, link to guides). SEO-optimized guides: "How to set up sales KPIs," "Best coaching frameworks for SDRs."

Dog-fooding: Use Apptivia's own Engage signals to find VP Sales who post about switching tools or hiring RevOps.

PHASE 3 — EXPANSION (Q4 2026 - Q1 2027)

Outbound + Partnerships

Outbound: Hire first SDR when ARR hits \$100K. Signal-driven prospecting using Apptivia's own Engage module.

Partnerships: Sales training firms (JBarrows, Sandler) as distribution partners — "Built-in methodology coaching."

Community: Sales Performance Slack community. Monthly "Sales Intelligence Report" newsletter.

PHASE 4 — SCALE (2027+)

Category Creation

Category: Define "Sales Performance Intelligence" as a new category (like Gong defined "Revenue Intelligence").

Enterprise motion: Dedicated AE for Enterprise tier. Custom onboarding packages. API partnerships with CRM vendors.

GTM Channels (Prioritized)

Channel	Effort	Expected CAC	Notes
Product-Led (self-serve)	Built	\$0-50	Stripe billing live, 14-day trial, in-app onboarding
LinkedIn Content	Low	\$100-200	Daily LinkedIn habit stack: post insights, engage with VP Sales content, build brand
Reddit → SEO Pipeline	Med	\$50-150	Answer RevOps questions, create SEO guides, build backlinks
Dog-Food Engage	None	\$0	Use Apptivia's own signal prospecting to find prospects
Training Firm Partnerships	Med	Revenue share	JBarrows, Sandler, Challenger Group — methodology alignment
Outbound SDR	High	\$300-500	Hire at \$100K ARR. Use Apptivia's Engage module for prospecting.

Launch Checklist

- Product demo video (2-3 min): live Scorecard → Coach nudge → Engage signal → outreach approval flow
- Landing page redesign: lead with metric ("Our teams book 40% more qualified meetings") not feature list
- AEO strategy: "Ask AI about Apptivia" structured content for AI search results (validated by Apollo's approach)
- Distribution spreadsheet: Personal network, industry contacts, newsletter creators (Kyle Poyar, Brendan Short, Emily Kramer)
- Anti-AI-slop filter: All marketing copy reviewed against antibody map — avoid "AI-powered," "data-driven insights," "unlock potential"

Key Marketing Messages

For Reps

"Stop guessing. See exactly where you stand, what to improve, and who to call next — every Monday morning."

Rep-first messaging. Not surveillance. Not a management spy tool. A performance coach that helps YOU hit quota.

For Leaders

"Replace your \$200K RevOps hire with a platform that scores, coaches, and prospects — 24/7, for \$49/seat."

ROI-focused. 13.6x return vs. RevOps salary. 40 hours/week saved across the team.

Customer Success Playbook

Retention is the product. Apptivia's onboarding maturity model guides customers from basic dashboard users to fully autonomous AI-coached teams — creating irreversible switching costs at each stage.

Onboarding Maturity Model

Level 1: Dashboard (Week 1)

Action: Admin configures 5 KPIs, connects CRM, invites team.

Success metric: First scorecard generated. Reps see their scores.

Apptivia features: Scorecard, Wallboard, basic analytics.

Level 2: Alerts (Week 2-4)

Action: KPI Watchdog active, coaching nudges firing, manager reviews trends.

Success metric: Manager takes action on first nudge notification.

Apptivia features: + Notifications, KPI Watchdog, anomaly detection.

Level 3: Coaching (Month 2-3)

Action: Manager creates first coaching plan from KPI data, conducts 1:1 with prep tool, assigns IDP.

Success metric: Rep's focus KPI improves by $\geq 10\%$ within coaching plan duration.

Apptivia features: + Coach, Coaching Plans, IDPs, 1:1 Prep, Aaron AI.

Level 4: Autopilot (Month 4+)

Action: All 8 crons running, Engage signals surfacing prospects, contests motivating team.

Success metric: Platform runs autonomously; team checks Apptivia before any other tool.

Apptivia features: Full platform: Engage, Contests, Achievements, Scheduled Reports.

"Earn the Right to Automate" Gating

Key Principle: Don't show advanced features until basics are configured. "5 great KPIs > 50 messy metrics." The onboarding flow enforces: *Configure KPIs* → *Connect data source* → *Generate first scores* → *THEN unlock Coach/Engage/Contests*. This prevents feature overwhelm and ensures data quality before AI layers activate.

Retention Metrics & Health Scoring

Health Signal

Green

Yellow

Red

Weekly active users	≥70% of seats	40-69%	<40%
Scorecard views/week	≥3 per user	1-2	0
Coach module usage	Active plans	Viewed, no plans	Never opened
Aaron conversations/mo	≥10	3-9	<3
Notification response rate	≥50%	20-49%	<20%

Expansion Triggers

- **Starter → Pro:** Manager asks "can I coach from this data?" or team hits 5-team limit
- **Pro → Enterprise:** SSO requirement, multi-org structure, API integration request, or >50 seats
- **Seat expansion:** Onboard another department/team. Territory expansion.

Product Roadmap — Built, Verified & Next

Apptivia's development follows a rigorous audit-and-fix cycle. The platform has been through 4 rounds of comprehensive code audits, fixing bugs, closing strategic gaps, and hardening multi-tenant security. Here's what's built, what's been fixed, and what comes next.

What's Built (Production-Verified)

Fully Built (Matches or Exceeds Strategy)

Item	Status	Details
Apollo.io Integration	SHIPPED	Deep integration: ICP prospector, engage agent, signal scan cron
Configurable Sales Methodology	SHIPPED	13 methodologies + 3 qualification frameworks + AI coaching context
Human-in-the-Loop Outreach	SHIPPED	engage_signal_actions: pending → approved → sent workflow
Signal-First Architecture	SHIPPED	45 universal + custom signals, 4-category taxonomy, multi-source pipeline
Automated Coaching Nudges	SHIPPED	Weekly cron: Tier 1 KPIs <80% for 2+ weeks → manager notification
Achievement & Badge System	SHIPPED	500+ achievements, 60+ badges, daily cron, first run: 2,213 awarded

Exceeds Strategy (Built Beyond Recommendations)

12 capabilities built that weren't in the original strategic plan: CEP pipeline stages, IDPs, Performance Reviews, Twilio Dialer, 8-slide Wallboard, Playbook Builder, Prompt Library, Website Visitor Tracking, SEC Edgar Analysis, Integration Framework (OAuth + API key), 6 Coaching Templates, 4 IDP Templates, Scheduled Reports.

Recent Fixes & Improvements (v3.0 Audit Cycle)

Fix	Impact
Org-scoping audit: 3 missing org_id inserts fixed (coaching plans flow)	Multi-tenant security hardened
Analytics cleanup: removed stale Sequences/Playbooks from Engage tab	Cleaner UX, no broken references
Contest UX consolidated: single side panel entry point	Simpler creation flow, eliminated redundant modal
1:1 Prep print preview fixed (display:none → visibility approach)	Print feature works correctly
IDP detail view: assigned rep name now displayed	Managers see who IDP belongs to
Contest empty-state button bug fixed	Create button works from empty state

What's Next (Prioritized Backlog)

PRIORITY 1 — LOW/MED EFFORT, HIGH IMPACT

Positive AI Insights

Extend KPI Watchdog to detect positive patterns (≥15% improvement, multi-week streaks). Green insight cards alongside anomaly alerts. Template: "Great momentum on {metric}! You've exceeded your goal for {N} consecutive weeks."

PRIORITY 2 — MEDIUM EFFORT, HIGH IMPACT

Aaron Role Presets

Role-filtered preset buttons: Rep: [Coach Me] [My Performance] [Deal Strategy]; Manager: [Team Overview] [1:1 Prep] [Coaching Plan]. Each auto-sends focused context.

PRIORITY 3 — MEDIUM EFFORT, HIGH IMPACT

Role-Based KPI Templates

title_kpi_templates table mapping titles to default KPIs/weights/goals. Auto-configure on title assignment with confirmation. Seeded: BDR (Calls 25%, Talk Time 20%, Meetings 20%, etc.), AE (Opps 30%, Stage 2 30%, etc.).

PRIORITY 4 — MEDIUM EFFORT, MEDIUM IMPACT

Signal Tier Processing + Multiple Outreach Variants

Add tier column to signal definitions (Fit/Relevance/Intent). Tiered thresholds: T1≥60, T2≥70, T3≥80. Generate 4 outreach variants (Direct, Consultative, Social Proof, Outcome) per signal.

UPCOMING FEATURES (DECISIONS LOCKED)

Share Agenda + Org Health Detail Modals

Share Agenda: 1:1 Prep "Share Agenda" button — auto-generated synopsis (2-3 topics + action items), editable by manager, notification + copy to clipboard. One-directional (manager → rep) for v1.

Org Health Modals: Shared OrgHealthDetailModal component for each card: title, score, explanation, data summary, "View Full Dashboard" link. Info icons from hardcoded constants file.

DEFERRED

Activity Heatmap + Selling Time %

Deferred: require hourly activity data and admin/selling categorization that don't exist yet. Revisit when CRM integration provides timestamp-level activity data.

Strategic Frameworks

Learn-It-All Framework (Cornell / Girotra)

Critical Unknowns (Demand-Side)

Supply (technology) is known — the platform is built. The critical unknowns are all on the demand side:

- **Riskiest assumption #1:** Sales leaders will consolidate onto one platform vs. buying point tools. *Test: Get 3-5 paying pilot customers on Scorecard alone.*
- **Riskiest assumption #2:** AI coaching nudges actually change rep behavior. *Test: Measure KPI improvement in coached vs. non-coached reps during Planera pilot.*
- **Riskiest assumption #3:** Teams paying \$19/seat will upgrade to \$49/seat within 90 days. *Test: Track expansion triggers in first 5 customers.*

Five Strategic Pillars

Role-Aware

Every role gets a tailored experience

Signal-First

Intent data drives all prospecting

Human-Loop

AI drafts, humans approve

Data Moat

Cross-org benchmarks compound

Rep-First

Not surveillance, performance tools

Theme 1: Every Role Needs a Different Experience

SDRs, AEs, Managers, and Admins have different daily tasks and KPIs. Apptivia makes role assignment a first-class concept: when tagged "SDR," the Scorecard shows SDR KPIs (Meetings Booked, Response Time), Coach nudges focus on prospecting discipline, and Aaron loads SDR-relevant presets. When tagged "AE," everything shifts to Win Rate, Deal Size, discovery prep.

Theme 2: Signal Intelligence Is the Moat

The 45-signal library with 3-tier taxonomy (Fit → Relevance → Intent) is the most important structural differentiator. Competitors either have no signals (Ambition, Spinify) or only basic intent

data (Apollo). Apptivia's signal processing pipeline (Apollo + Tavily + SEC + Claude) creates compound intelligence that improves with every scan.

Theme 3: Unified Data Is Worth More Than Fancy AI

Apptivia's positioning: NOT an outbound tool (vs. Apollo, Outreach), NOT a conversation intelligence tool (vs. Gong, Chorus). It is **performance intelligence that sits above all of them**, pulling data from wherever it lives, scoring it, coaching from it, and triggering action based on it.

Theme 4: Evolution from Rep Scoring to Org Intelligence

Individual scorecards are table stakes. The next evolution: organizational performance intelligence via the Org Health Scorecard — scoring the organization across 5 dimensions (Team Performance, Pipeline Health, Config Completeness, Engagement Trend, Outbound Motion) with actionable "fix it" links on every Yellow/Red item.

Maturity Model for Customer Organizations

Level	Focus	Apptivia Module	Validation Question
Fundamentals	Know your numbers	Scorecard + Wallboard	Can reps see their weekly score?
Adoption	Act on data	Coach + Aaron AI	Are managers coaching from data?
Optimization	Scale what works	Engage + Contests	Is outreach signal-driven?
Amplification	System runs itself	Autopilot (8 crons)	Does the platform run autonomously?

Financial Projections

Year 1 Scenarios (Conservative / Base / Optimistic)

Metric	Conservative	Base	Optimistic
Paying customers (end of Y1)	8	20	40
Average seats per customer	15	20	25
Average tier mix	70% Starter / 30% Pro	50% Starter / 50% Pro	30% Starter / 60% Pro / 10% Ent
Blended ARPU/seat/mo	\$28	\$34	\$42
Monthly Recurring Revenue (end Y1)	\$3,360	\$13,600	\$42,000
Annual Recurring Revenue (end Y1)	\$40,320	\$163,200	\$504,000

3-Year Revenue Trajectory

	Year 1	Year 2	Year 3
Customers	20	80	250
Total seats	400	2,000	7,500
Blended ARPU	\$34	\$40	\$45
MRR (end of year)	\$13,600	\$80,000	\$337,500
ARR (end of year)	\$163K	\$960K	\$4.05M

Unit Economics Target

\$400

Target CAC
(blended)

\$8,160

Target LTV (20
seats, 12mo)

20:1

Target LTV:CAC
ratio

<3 mo

Target payback
period

Cost Structure

Category	Monthly (Current)	Monthly (at 100 customers)
Hosting (Hostinger VPS)	\$25	\$200 (scaled VPS)
Supabase (DB + Auth)	\$25	\$200 (Pro plan)
Anthropic API (Aaron + AI)	\$50	\$500
Twilio (VoIP)	\$10	\$200
Apollo API (enrichment)	\$0 (free tier)	\$100
Stripe fees (2.9% + \$0.30)	\$0	\$2,400
Domain + SSL	\$5	\$5
Total Infrastructure	\$115	\$3,605
Gross Margin	—	~95% (\$80K MRR - \$3.6K)

SaaS Economics: Infrastructure costs scale sublinearly with revenue. At 100 customers and \$80K MRR, infrastructure costs are ~4.5% of revenue, yielding ~95% gross margin. The primary cost at scale will be human (customer success, engineering), not infrastructure.

Risk Analysis & Mitigation

Risk Matrix (Doubt × Importance)

Risk	Doubt	Impact	Score	Mitigation
Will orgs consolidate onto one platform?	3/3	3/3	9	Land with Scorecard alone (proven need). Expand only after proving value. Don't require full-stack adoption.
CAC vs. LTV in competitive market	3/3	3/3	9	PLG-first (near-zero CAC). Content marketing over paid ads. Dog-food Engage for prospecting.
Time to sustainable revenue	3/3	3/3	9	Low burn rate (\$115/mo current). Bootstrap-compatible. Fundraise only when unit economics proven.
Single developer scaling risk	2/3	3/3	6	Codebase well-structured (98 components, 27 hooks, 12 constants). AI-assisted development (Claude Code). First hire = senior fullstack.
Data quality dependency	2/3	3/3	6	"Earn right to automate" gating. KPI setup validation. Data quality checks before AI layers activate.
ICP clarity	2/3	2/3	4	Planera pilot will validate primary ICP. Iterate based on first 5 customers.
Competitive response (Gong, Weflow)	2/3	2/3	4	Speed advantage: we're built while they'd need to add modules. Switching cost: historical data moat.
CRM integration complexity	2/3	2/3	4	Integration framework already built (OAuth + API key pattern). 10 connectors live. Salesforce/HubSpot are primary.

Key Risk: Single Developer

Mitigation strategy: The codebase is not a prototype — it's production-grade with 120 database migrations, comprehensive RLS policies, and well-structured component architecture. Claude Code accelerates development 5-10x. First engineering hire should be a senior fullstack developer who can own features end-to-end. Target: hire at \$100K ARR or after seed funding.

What Could Kill Us

- **Gong adds coaching + gamification + prospecting:** Unlikely in <2 years. Their DNA is conversation intelligence, not performance management. Acquisition risk is higher than build risk.
- **CRM vendors add native scoring:** Salesforce/HubSpot could build basic scoring. But they won't build AI coaching, signal processing, or gamification. They'll be integration partners, not competitors.
- **AI commoditization:** Generic AI coaching becomes free. Apptivia's moat is the data (cross-org benchmarks, historical coaching plans), not the AI model itself.
- **Market timing:** Sales teams not yet ready for "productized RevOps." Mitigated by starting with simple scorecard (proven need) and expanding.

The Ask, Timeline & Next Steps

Current Status

90-Day Plan

Fundraising Strategy

Stage	Trigger	Target	Use of Funds
Bootstrap	Now → \$100K ARR	\$0 external	Pilot, iterate, prove unit economics
Pre-Seed	\$100K ARR + 10 customers	\$500K-\$1M	First 2 hires (engineer + CS), scaling infrastructure

Seed	\$500K ARR + 40 customers	\$2-4M	Team of 8-10, enterprise features, category marketing
------	---------------------------	--------	---

VC Target List

Tier 1 (Best Fit)

- **Alt Capital** (Jack Altman) — SMB SaaS focus
- **Conviction** (Sarah Guo) — AI-native companies
- **Theory Ventures** (Tomasz Tunguz) — Data-driven SaaS

Tier 2 (Strong Fit)

- **Lightspeed** — Enterprise SaaS
- **a16z** (Olivia Moore) — AI applications
- **Bessemer** (Talia Goldberg) — Cloud infrastructure
- **Six Point Ventures** — B2B SaaS

Pitch Deck Structure

1. **Purpose:** Why sales performance intelligence matters now
2. **Problem:** Three failure modes + \$3.35M annual cost for a 50-rep team
3. **Solution:** Performance Intelligence Stack (5 layers, all built)
4. **Evidence:** 20 pages, 80 endpoints, 120 migrations, Planera pilot data
5. **Market:** \$8.2B TAM, \$2.4B SAM, signal-first selling moment
6. **Unique Advantage:** Productized RevOps replacing \$200K hire at 13.6x ROI
7. **Business Model:** \$19/\$49/custom per seat, 95% gross margin, PLG
8. **Competitive Moat:** Cross-org data, full-stack lock-in, switching cost
9. **Team:** Solo founder with production-grade platform (speed advantage)
10. **Ask:** Pre-seed at \$100K ARR for first 2 hires

Industry Validation & Research Base

Apptivia's strategy is grounded in 70+ industry analyses across 8 research batches. Key validations:

Research Summary

Batch	Sources	Key Validations
Batch 1-2	20 images	Role-based KPIs, coaching content, signal-first GTM, AI sales prep, GTM orchestration
Batch 3-4	19 images	GTM health scorecard, AI prospecting workflow, MEDDPICC landscape, multi-role AI agents, GTM Efficiency Pyramid
Batch 5-6	19 images	SaaS business equation, 12-week GTM reality check, LinkedIn brand growth, enrichment waterfall architecture
Batch 7	7 images	LinkedIn Brand Growth full breakdown (4 stages), Claude capabilities ladder (8 levels)
Batch 8	22 pieces	RevOps Agent Deployment Framework (12 functions, \$200K replacement, 30-40x ROI) , LangChain GTM Agent (250% conversion benchmark), multi-agent architecture, AI Agent Builders

Key External Validations

- **RevOps Agent Framework:** Independent analysis mapped 12 RevOps functions — Apptivia productizes all 12. Validates positioning as "\$200K hire replacement."
- **LangChain GTM Agent:** Autonomous outbound agent architecture matches Engage's design exactly. Reported 250% conversion increase + 40 hours/week saved.
- **GTM Efficiency Pyramid:** Sales Performance Pyramid maps directly to Apptivia's product stack (Scorecard = base, Coach = middle, Engage = top).
- **Signal Library Taxonomy:** 12-signal GTM taxonomy from industry framework validates Apptivia's 45-signal library approach.
- **Human-in-the-Loop Validation:** 6+ practitioners independently validate the pending → approved → sent workflow vs. autonomous AI SDR approach.
- **Enrichment Waterfall:** 4x confirmed across batches — cheap-to-expensive enrichment strategy for Engage (free signals first, paid enrichment second).

- **Salesfinity Competitor Analysis:** Direct competitor in SDR analytics; Apptivia differentiates with full coaching + prospecting stack.

VC Targets & Pitch Structure

Detailed VC Target List

Firm	Partner	Thesis Fit	Stage
Alt Capital	Jack Altman	SMB SaaS, productivity tools	Pre-Seed / Seed
Conviction	Sarah Guo	AI-native SaaS companies	Seed / Series A
Theory Ventures	Tomasz Tunguz	Data-driven SaaS, AI applications	Seed / Series A
Lightspeed	—	Enterprise SaaS at scale	Seed / Series A
a16z	Olivia Moore	AI applications, consumer/prosumer	Seed / Series A
Bessemer	Talia Goldberg	Cloud, vertical SaaS	Seed / Series A
Six Point Ventures	—	B2B SaaS, sales tech	Pre-Seed / Seed
1818 Venture Capital	—	Early-stage B2B	Pre-Seed
VU Venture Partners	—	Emerging tech	Pre-Seed / Seed

Pitch Narrative

The 60-Second Pitch: "Sales teams use 10+ tools but have zero visibility into whether reps are actually getting better. Managers coach by gut. Reps waste 70% of their time on admin. Companies hire a \$200K RevOps person to glue it all together. Apptivia replaces that hire. We're a unified platform that scores rep performance weekly, auto-coaches from the data, surfaces buying signals for prospecting, and gamifies the entire experience. The product is built — 20 pages, 80 API endpoints, 120 database migrations, all production-verified. We're launching our first pilot this month and looking for our first 10 paying customers."

What NOT to Build

Strategic discipline requires knowing what to skip. These are features and capabilities that have been explicitly de-prioritized:

Feature	Why Not	Revisit When
Visual workflow builder	Massive engineering effort, nice-to-have. Competitors (Clay, n8n) already do this.	Year 3+ if customers demand it
Voice/Vision for Aaron	Text-based coaching not yet proven. Audio/video adds complexity without validated demand.	After text coaching proves ROI
Native LinkedIn integration	LinkedIn API is restrictive. Legal risk. Browser extension approach is fragile.	If LinkedIn opens API access
Partner/Channel program	Irrelevant until direct sales motion works. Channel adds complexity before PMF.	Post \$1M ARR
Claude Skills marketplace	Year 3+ idea. Need established platform first. Premature abstraction.	Year 3+ with ecosystem
Activity Heatmap	Requires hourly activity data that doesn't exist. CRM integration needed first.	After deep CRM integration
Selling Time % metric	Requires admin vs. selling categorization. No clean data source for this yet.	After CRM + calendar data
Multi-step email sequences	Outreach/SalesLoft already dominate. Compete at intelligence layer, not execution.	If Engage proves high adoption

Guiding principle: "Earn the right to automate." Don't build advanced features until basic ones prove value. Don't build AI layers until data quality is ensured. Don't build integrations until core loop is validated.
